## EXPERIENCE

### Nordhealth

July 2024 - Now

Product designer · Healthcare practice management SaaS · Sweden (Remote)

- Own design for the unified platform, the web product healthcare clinics in Denmark and Norway run their practice on: journaling, patient management, invoicing, reporting and accounting.
- Designed and shipped the company's first AI assistant, a journaling tool now on 500+ paying subscriptions and 1,600 hours of daily use, saving clinicians four to five hours a week.
- Maintain the design system in both design and code ([nordhealth.design](#)), and contribute front-end work to ship it.
- Mentor interns and junior designers through their first product work, and started the company-wide design critique that has run since May 2025.

### POKA Reminder

May 2024 - Feb 2025

Founder, designer & developer · Consumer iOS medication app · Sweden (Remote)

- A medication reminder built around a character rather than an alarm, using something worth checking in on to motivate people to take their medication on time.
- Eight months from first sketch to the App Store and first users, everything solo: research, design, React Native code, store listing and review. Built alongside full-time work.

### EasyPractice

July 2023 - July 2024

UX/UI designer & frontend developer · Scheduling SaaS for clinics · Denmark (Remote)

- Sole designer on the web product clinics and private practitioners use to manage their calendar and bookings, owning research, UX, UI and the front-end work (Vue.js).
- Led the interface design for moving customers off the legacy desktop application, rebuilding the workflows they used daily and validating each against how clinics actually booked.
- Migrated 2,000 of 5,000 customers to the web product, cutting the cost of running two products in parallel and giving clinics faster booking on any device.

### Volvo Buses

May 2022 - Aug 2022

Engineering & product development admin · Internal tooling · Gothenburg, Sweden

- Designed and built two internal tools for the engineering organisation: one for visualising data, another for managing the project network across teams.

## EDUCATION

### University of Gothenburg

2020 - 2023

B.Sc. Applied Information Technology · Gothenburg, Sweden

- Focus on cognitive science and human-computer interaction. Thesis on human perception of art in the age of artificial intelligence.

## SKILLS

|                  |                                                                                             |
|------------------|---------------------------------------------------------------------------------------------|
| <b>Design</b>    | Figma, prototyping, design systems, user research, usability testing, Dovetail, Illustrator |
| <b>Code</b>      | HTML/CSS, JavaScript (Vue, React, React Native), Python                                     |
| <b>Languages</b> | Swedish (native), English (fluent), Chinese (fluent)                                        |
| <b>Interests</b> | Creative coding and generative art, guitar, bouldering, football                            |
